

QUICK TUTORIAL

TracTrac Sailing allows you to see GPS-based tracking of your favourite sailing events – LIVE and in replay. Enter www.tracrac.com/?page=archive, find your favourite event and a screen similar to the one above will appear.

The Race Viewer requires Java(tm) version 1.5 or higher. Check <http://java.com/en/download/installed.jsp> to make sure you have the recommended version.

1. Zoom by using the mini-map buttons or 'scroll wheel-function' and pan by dragging the map with the mouse. Map view can also be moved by clicking the mini-map.
2. Locate a specific boat on the map by clicking boat name in the Leaderboard panel.
3. **New!** Double-clicking a boat in the Leaderboard will display 1, 3 and 5 day-isochores.
4. Moving your mouse over a boat a popup-label will display current information.
5. **New!** Use time-slider or play button to see PredictedRoutes for all boats
6. Press 'Replay' and the time-slider and play-button can be used for replaying the race up until now. (Switch back to online mode by pressing 'Online').
7. Increase or decrease the speed-up of PredictedRoutes and Replay using the Speed X controls. (Negative values make boats backtrack).
8. Mouse-click on a boat to snap the focus onto that boat.

The active leaderboard continuously displays the current ranking of the competitors, with the leading team at the top. The column "DTF" shows distance to the finish in nautic miles, the column "DTL" shows distance to the leader, the last column shows boatspeed in knots.

StealthPlay: As long as a boat is in StealthPlay it is highlighted with a grey spotlight on the map and with the StealthPlay-icon at the leaderboard. Read more at:
